50X1-HUM

The results of the harvest in the Bezirk Rostock has turned out better than had originally been thought of. One expected a ~~xxx~~ harvest of between 5-3% less than the previous year. On the other hand the potato harvests are just below normal. They are on the ~~xxxxx~~ average in Rostock Bezirk 130 dz per hectare. The soil become much hardened ~~xxxx~~ because of the long dryness, so that it is extremely difficult to use potatoe combines. In the Bezirk Rostock by the 5th of this month still a half of the pot-toes will not have been harvested. Also the sugar beets have had completely unsatisfactory results. The best harvests have 260 dozen per hectare. The harvest goes very slowly forards. Because of the tremendous hardness of the soil the turnips are very difficult to get out of the ground. The tops break almost everywhere, and this is where the highest sugar content is. The use of

2.

continues is almost impossible. The I.P.C. has for months has had to transport

50X1-HUM

water to the farmers for for the cattle from the pools etc, since the

wells have dried up. Often the well water has not even been sufficient to

cover the human needs. The shortage of water is almost more difficult to bridge

than the shortage of raw fodder and beets. The summer fruit crops has

brought only a small amount of green amounts, and have grown very little and

are very small, so that they are used for feeding the cattle. Great difficulties

also exist in the fall cultivation. Frequently the plows don't go through the

soil at all and there where they are set in deeply only the ~~xxix~~ are broken

clods

up. From here seed beets are almost impossible to make. Such kinds

of ~~xxix~~ difficulties that have appeared in the fall cultivation this year, have

immemorial.

not been seen ~~xxix~~ from time ~~xxix~~. As a consequence of this the entire

ra's are extremely meager - and the winter wheat that has ~~xxix~~ been harvested

is also very meager.

ILLEGIB

Extremely great this year has been the damage caused by field mouses.

3.

50X1-HUM

Average wise the private farmers ~~are~~ paid 200 D^r per hectar for soil improvement

work. In do fat as the farmers refuse to pay the amount, as they have not given their assent for the carrying out of the work, then the money for the milk at the dairies is confiscated.

attempt at the
The SED officials ~~are~~ at the LPG assemblies to convince the members of the

LPG that it is correct to unite with the other LPG's to a large Kolchose.

The ~~pro~~ perspective plan provides that in some parts of the Bezirk already

are pooling together several LPG's into a Large Kolchosen by 1960, although

the LPG- members have refused strenuously to accept this concept. The smallest

of the Big Kolchose is to amount ~~is~~ ~~xix~~ for the time being an average of

2000 hectaras LWF. At very many of the LPG's complete ~~會議~~ meetings,

when the uniting comes into the conversation, then it turns into a tumultuous

scene. These are often spurred on by the chairmen and other ~~黨~~ctionaries, because

as soon as ~~any~~ the ~~pro~~ large Kolchosen come about, they will lose their

jobs.

50X1-HUM

As the private farmers in ~~Mr~~ Vorpommern have not only ~~saved~~ their potatoe harvest and for the most part, the sugar beets are also already out of the ground, the LPG's are still very far behind with ~~in~~ their work. The Bezirk Rostock has published in the press that the clearing of the potatoes is 100% ready. According to its observation, still however at least 20% of the potatoe fields can be cleared. Added to this is the shortage of laborers, which gleans the potatoe fields. The potatoe combines have in this year worked particularly poorly, about 30% of the potatoe harvests have remained on the fields after the reaping of the combines. The harvests in Bezirk ~~Rumki~~ Rostock should amount to 180 dz per hektar on the average. Sugar beets are to be about 240 dz per hektar. The sugar percentage in this year is about 2% higher than last year and may amount to 17-18%. The school children have been extensively put into the shell fruit harvesting in the LPG's. One can well say that the children work 3 days of the week in the LPG and at the most have still 3 ~~days~~ days of school. Ostensibly these so-called most performed polytechnically instruction days during the course of the winter are to be saved. This was said at least to the parents of the children when they complained over the constant employment of the children. The ~~mis~~ utilization of the MTS machines was in this year on the basis of the dryness and the hardened soil particularly difficult. Already after a short time, the working performance came to a stop particularly in the case of the combines, as bolts, sprockets, etc. broke and ~~repairs~~ replacements are not available in enough quantity. Although the potatoes and also the turnip combines have been out of action for 2 days. If the members of the LPG have been asked to collect by hand often it is refused with the reasoning that they have been promised that all work would be done by machine. The LPG ~~mis~~ attempted to borrow ~~in~~ the old uprooting machine from the private farmers. The private farmers refused this with the reasoning that the soil is much too hard and in a short time the uprooting machine would become defective.

50X1-HUM

The fall seeding is, [redacted] in the

Bezirk Rostock being carried on at the most to 50%. The tractors with their plows on the ~~xxm~~ stubble fields simply did not go into the ground and it was only partly plowed and the machine looked as if it had been in an explosion in a stone quarry. For these reasons one has tried to cultivate the reaped shell fruit areas with winter seed. The seeding is very poor and according to the opinion of specialists must be recultivated in the spring.

50X1-HUM

The SED officials have now tried to carry on the unifying of several LPG into a large Kolchoesen. This makes not only problems ~~mix~~ with the LPG members but also with the managing committee and with the SED ~~Kreis~~ Political-Secretary for the ~~kg~~ LPG himself. They know exactly that then their places can be saved and they ~~then~~ themselves ~~ni~~ must perform manual work as a member of ~~in~~ the LPG. Through this sort of constant agitation, the working morale of the LPG members becomes worse from week to week. Many of the farmers who originally did not have to join but nevertheless became members of the LPG and ~~in~~ today are sorry for joining this organization, are the best propagandists for the private farmers, in so far as they have contact with one another. In conversations they warn the ~~x~~ private farmers against joining and give their own ~~exm~~ examples and what happened to them. Although it is clearly evident, with which great difficulties the LPG must struggle with, a heavier pressure is being made on the private farmers through the LPG ~~prang~~ propaganda brigade, for them to join the LPG's. Since they cannot be won over with speeches alone, in some of the Krieses in the Bezirk Rostock the farmers are not being given any more artificial fertilizer for the fall cultivation. Nothing is to be said about making available seeds for the fall cultivation. The refusal to deliver the artificial fertilizer is to apply for the entire year for the private farmers and only after 1960 will they once again be able to receive artificial fertilizer. This will show up naturally in the harvest yields of ~~in~~ the coming year.

In general, the ~~xxxxxx~~ weather in late summer and beginning of fall was very favorable so that the entire after crop of wheat without a doubt could have been saved. The independent ~~ix~~ farmers ~~xxxx~~ have also completely
